PROFILE NOTE

This consolidated profile brings together the corporate, investor-readiness, international-buyer, and operating-positioning content contained in the three supplied Marma Minerals documents. It is intended to support structured conversations and should be read together with the document-control note in the compliance section.

1 Company at a Glance

A focused platform for mineral opportunity

Marma Minerals Company Limited is a Zambian private company limited by shares, incorporated in Lusaka on 30 October 2025. The company’s registered activity base spans mining, quarrying, support activities for mining and quarrying, and wholesale trade. Its supplied Mineral Trading Permit identifies gold, silver, and platinum as the company’s precious-metals categories. [1] [2] [3] Marma Minerals is positioned to connect mineral supply with disciplined commercial execution. Its operating proposition brings together sourcing, documentation, quality evidence, processing or refining coordination, logistics, and delivery planning so that producers, processors, buyers, investors, and service providers can engage with greater clarity.

Primary sectors	sec-	Mining, mining	quarrying, support, wholesale trade

PRECIOUS-METALS FOCUS

Au
GOLD

Ag
SILVER

Pt
PLAT-INUM

Our precious-metals pathway is documentation-led. Each opportunity is considered around source authority, material description, assay or quality evidence, custody, authorised processing, logistics, buyer specification, and settlement.

OUR POSITIONING

A practical minerals partner for producers, processors, buyers, investors, and service providers who value clarity, traceability, and dependable execution.

2 Direction and Values

Clarity from source to settlement

Our ambition is to make mineral transactions easier to understand and more dependable to execute. Marma Minerals seeks to operate at the point where mineral-sector opportunity becomes a properly structured commercial relationship.

VISION

To become a trusted Zambian minerals partner known for dependable supply, responsible operations, and value creation across the mineral chain.

MISSION

To develop and facilitate mineral opportunities through responsible support, credible trading relationships, and precious-metals solutions grounded in verification and compliance.

2.1 Operating principles

Integrity in documentation

We work from clear source information, realistic specifications, and documented authority to sell or transact.

Discipline in execution

We coordinate assay, processing, security, logistics, and settlement before commitments are made.

Respect for the operating context

We recognise that responsible mineral activity depends on safety, environmental stewardship, stakeholder trust, and regulatory alignment.

Long-term relationships

We seek durable relationships with producers, buyers, processors, technical partners, and communities.

OUR PROMISE

We aim to make every transaction easier to understand and every supply relationship more dependable.

3 What We Do
A broad mineral-sector mandate

The registered activity base provides optionality across upstream opportunity, operational support, material movement, and trade. [1]

MINING & NON-FERROUS ORES

Mineral-development opportunities across iron ores and other non-ferrous metal ores, subject to project-level diligence and appropriate permissions.

QUARRYING & AGGREGATES

Quarrying opportunities across stone, sand, clay, and other quarrying activity, supported by practical supply-chain coordination.

MINING SUPPORT

MINERALS & WHOLESALE TRADE

Support activities for mining and quarrying that connect operational requirements with commercial delivery.

Documentation-led relationships with producers, processors, industrial buyers, investors, logistics providers, and technical partners.

Representative quarrying visual; it is not presented as a photograph of a named Marma Minerals project.

WHERE WE CAN ENGAGE

Mineral sourcing • Quarrying and aggregates • Mining support • Precious-metals trading • Refining coordination • Wholesale supply relationships

4 Precious Metals

Gold. Silver. Platinum.

The supplied Mineral Trading Permit identifies all three precious-metal categories. Across the three categories, Marma Minerals focuses on sale, sourcing, assay, refining coordination, and delivery through appropriate and documented channels. [3]

Category	Commercial pathway	Primary control lens
----------	--------------------	----------------------

Gold	Sale, sourcing, assay, refining coordination, and delivery	Origin, purity, assay, chain of custody, and settlement
Silver	Sale, sourcing, assay, refining coordination, and delivery	Material form, grade, assay, logistics, and buyer specification
Platinum	Sale, sourcing, assay, refining coordination, and delivery	Authenticity, grade, security, authorised processing, and settlement

A documentation-led route

Opportunities are structured around source validation, ownership or authority to sell, quality evidence, secure movement, processing requirements, delivery, and transparent settlement terms.

A clear boundary

The supplied permit verifies mineral trading in gold, silver, and platinum. It does not identify a company-owned refinery; where refining is required, the authorised processor and route must be specified.

Representative precious-metals visual; products shown are illustrative and carry no company marks or inventory claim.

5 Refinery and Processing Solutions

Authorised channels. Clear controls. Documented settle- ment.

Marma Minerals presents refining as a coordinated commercial pathway through suitable authorised channels. The company’s supplied records do not identify a company-owned refin-
ery. Refining engagements should therefore specify the responsible processor, assay method,
handling controls, refining route, settlement basis, and formal documentation before material
moves. [1] [2] [3]

Gold

Gold refining pathway

Structure the route around origin and authority, purity and independent assay evidence, custody, secure logistics, autho-
rised refining coordination, and transpar-
ent settlement.

Key evidence: source authority • material description
• assay basis • chain of custody • processor terms

Silver

Silver refining pathway

Align material form, grade, assay basis, processing requirements, logistics, buyer specification, and settlement expectations before the route is confirmed.

Key evidence: product form • grade • assay • logistics
• buyer specification • processor terms

Platinum

Platinum refining pathway

Give heightened attention to authentic-
ity, grade, security, authorised processing, custody, and settlement controls appro-
priate to a specialist precious-metals cate-
gory.

Key evidence: authenticity • grade • security plan •
authorised processor • settlement basis

PROCESS CONTROL

A compliant route begins with verified counterparties and material authority; continues through independent assay where appropriate, controlled handling, authorised processing, and documented delivery; and closes with a clear settle-
ment record.

Representative refining and quality-control visual; it is not presented as a photograph of a Marma Minerals-owned facility.

6 How We Create Value

From source to settlement

We bring the evidence, process, and commercial pathway together before a transaction is confirmed. Every opportunity remains subject to transaction-specific verification, independent assay where appropriate, regulatory checks, and formal documentation.

COMMON DISCIPLINE

Source authority • Material verification • Quality evidence • Transparent terms • Controlled movement • Documented settlement

7 Investor and International Buyer Proposition

Built for disciplined commercial conversations

Marma Minerals is positioned to build repeatable sourcing, processing, wholesale, and international-buyer relationships around its documented platform. The supplied records establish the legal entity, activity base, and precious-metals permit; operating KPIs, project economics, funding needs, and forecasts remain to be confirmed through diligence. [1] [2] [3]

7.1 What international buyers need before volume

SPECIFY

Commodity, product form, approximate quantity, quality specification, origin, and destination.

VERIFY

Source authority, quality evidence, onboarding requirements, and chain-of-custody expectations.

PROCESS

Authorised processing or refining channels, assay method, handling controls, and documentation.

DELIVER

Logistics, delivery, settlement, and formal documentation required before execution.

FIRST ENQUIRY

Commodity • Approximate quantity • Material form • Source authority • Assay or quality evidence • Destination • Preferred commercial pathway

7.2 Investor lens and diligence roadmap

The investment case is the documented platform and the opportunity to build repeatable execution around it. A responsible underwriting process should move through three workstreams:

01

Regularise & verify

Confirm current PACRA status, permit standing, ownership, authority to contract, and corporate records.

02

Evidence the engine

Provide a project and asset register, operating KPIs, sourcing pipeline, processing counterparties, and quality-control records.

03

Underwrite the plan

Provide historical financials, current accounts, an integrated model, funding requirements, milestones, and transaction structure.

8 Financial Transparency and Compliance

Transparency strengthens confidence

The supplied records establish the platform; operating and financial underwriting remains a diligence step. Revenue, operating profit, production volumes, forecasts, funding requirements, project economics, and returns are not provided in the supplied materials and should not be inferred from registration, nominal capital, or permit status.

Information category	Current status	Investor takeaway
Nominal capital	K20,000 in supplied PACRA printout	A corporate snapshot, not a valuation or proof of invested cash.
Historical revenue	Not provided in supplied records	Request verified operating data.
Operating profit / EBITDA	Not provided in supplied records	Underwrite from current accounts and supporting evidence.
Production and sales volumes	Not provided in supplied records	Request period-specific volume records.
Forecasts and funding need	To be confirmed through investor diligence	Request an integrated model and funding plan.
Project economics and returns	To be confirmed through project-level diligence	Evaluate only after project evidence is available.

8.1 Credentials

COMPANY REGISTRATION

The supplied Certificate of Incorporation confirms a private company limited by shares from 30 October 2025 under Zambia’s Companies Act, 2017. [1] [2]

TAX REGISTRATION

The supplied Zambia Revenue Authority certificate records taxpayer-identification registration effective 30 October 2025 and issued 16 January 2026. [1] [2]

MINERAL TRADING PERMIT

Permit No. MTP 20134/25 identifies Marma Minerals Company Limited as the holder and covers gold, silver, and platinum. The certificate states a three-year validity period commencing 5 November 2025. [1] [2] [3]

COMPLIANCE PRINCIPLES

Documented counterparties • Verified material and authority • Appropriate assay and processing controls • Traceability • Confidentiality • Commercial commitments matched to verified capability.

DOCUMENT-CONTROL NOTE

A PACRA computer printout supplied for this profile is dated 16 April 2026 and contains a field reading “Struck off/Ceased on 16 APR 2026 08:31.” This conflicts with the other supplied company records. Marma Minerals should confirm its current standing with PACRA and regularise the record if required before the profile is used for tenders, banking, investor outreach, or external commercial circulation. [1]

10 Contact and Next Steps

A focused conversation is the right next step

Different partners need different starting points. The objective is to make the first workstream specific, documented, and aligned to the capability required.

FOR INVESTORS

Request the diligence pack covering legal status, operating plan, financial statements, project pipeline, funding needs, counterparties, and transaction structure.

FOR BUYERS

Share the commodity, product form, target quantity, quality requirements, destination, and onboarding expectations so a suitable route can be assessed.

FOR STRATEGIC PARTNERS

Identify the capability you can contribute—sourcing, processing, logistics, technical support, or market access—and the conditions for collaboration.
